

BANK SLOT BORDERS - COMMUNITY TEST BUILD

Download and open

For Windows 10/11 on an Intel or AMD 64-bit PC. No separate Java install is needed.

1 Open the website

Visit bank-grid-friends.pages.dev and click **Download Windows launcher**.

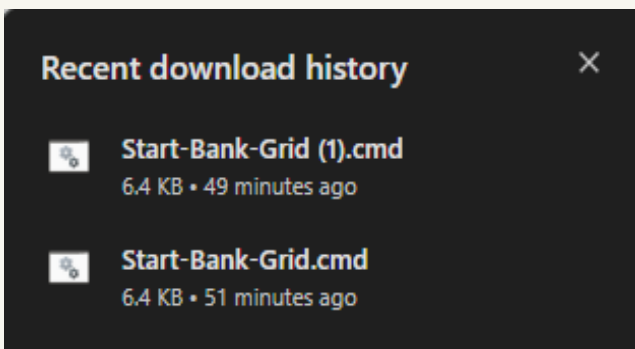

Choose **Windows launcher**.
The Mac download is a different file.

WEBSITE SCREENSHOT - WINDOWS DOWNLOAD BUTTON

2 Open the downloaded file

In your browser downloads or Downloads folder, open **Start-Bank-Grid.cmd**. If using the ZIP alternative, extract it first.

A name ending in **(1).cmd** is another downloaded copy. Open the newest copy once.

AUTHOR-SUPPLIED DOWNLOAD HISTORY

BANK SLOT BORDERS - COMMUNITY TEST BUILD

Wait for setup, then sign in

The first start downloads portable Java, the plugin source, Gradle and RuneLite dependencies.

3 Leave the launcher window open

Setup needs internet and downloads several hundred MB. Let it finish; the development client will open afterward.

```

```
[3/3] Building and opening RuneLite...
```

4 Sign in inside RuneLite

For a Jagex account: open the **Jagex auth panel** on the right sidebar, choose **Add Jagex Account**, and complete the sign-in window.

JAGEX PANEL - ACCOUNT NAMES HIDDEN

1. Click **Add Jagex Account**.
2. Complete sign-in and select your character.
3. Click **Play Now** on the login screen.

Official login guide: [RuneLite - Using Jagex Accounts](#)

Keep the launcher window open while playing. Sign in through RuneLite; the launcher does not ask for your password or account tokens.

BANK SLOT BORDERS - COMMUNITY TEST BUILD

Enable the plugin

Use the development client opened by the launcher. The normal RuneLite client will not gain the plugin automatically.

5 Find Bank Slot Borders

Open RuneLite plugin settings, search for **Bank Slot Borders**, and enable its toggle. Open the plugin settings, then open your bank.

Plugin settings - illustration

Bank Slot Borders

Show grid **On**

Style preset **Custom**

Grid style **Continuous lines**

Transparency **5**

Line thickness **1**

Only while dragging **Off**

AUTHOR-SUPPLIED BANK EXAMPLE

6 Start with a simple baseline

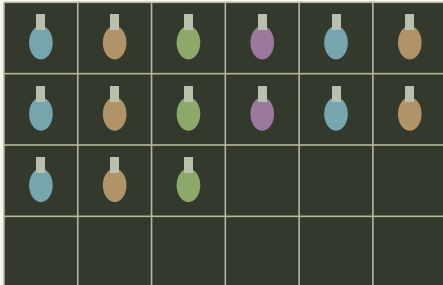

Record your current settings first. For this test, choose **Custom** and **Continuous lines**, with **Show grid on**, transparency **5** and **Only while dragging off**. Leave optional helpers off.

Expected: the grid appears only over the open bank item area. It should disappear when you close the bank and return when you reopen it.

BANK SLOT BORDERS - COMMUNITY TEST BUILD

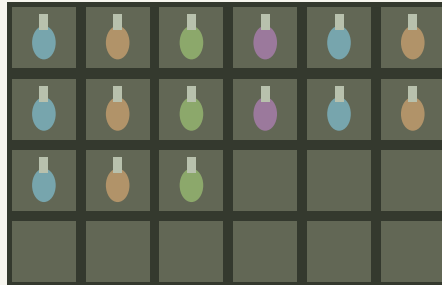

Test the core grid

Keep Style preset on Custom while checking individual settings. Try these tests one at a time.

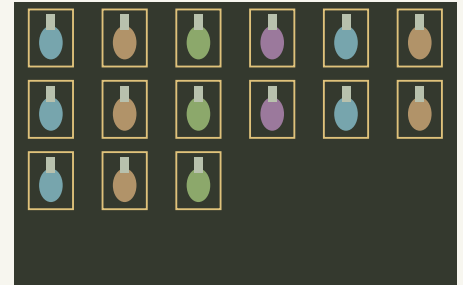

Continuous lines

Lines between cells, including empty space.

Shaded squares

Filled squares with small gaps.

Item borders

Boxes around rendered items.

ILLUSTRATIONS - COMPARE THE THREE GRID STYLES IN YOUR OWN BANK

Change Grid style

Choose each style shown above. Items and placeholders should stay aligned; bank controls should remain clear.

Check transparency and thickness

Try transparency 1, 5 and 10: 1 is opaque; 10 makes the grid invisible. In line or border style, compare thickness 1 and 4.

Check Only while dragging

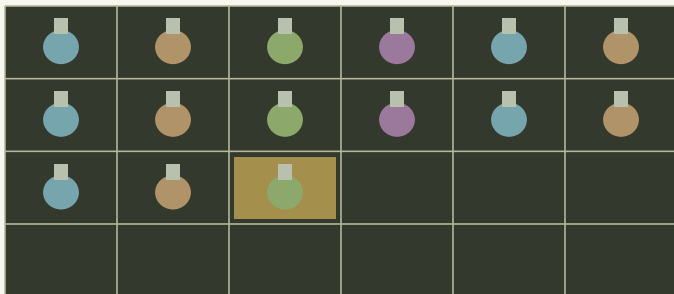

Turn it on. A click alone should not show the grid; actively drag a bank item to show it, then release to hide it. Turn the option off to restore the always-visible grid.

An entirely empty bank has no item anchor, so no grid is drawn. Empty squares inside a populated bank are covered by lines and shaded-square styles.

BANK SLOT BORDERS - COMMUNITY TEST BUILD

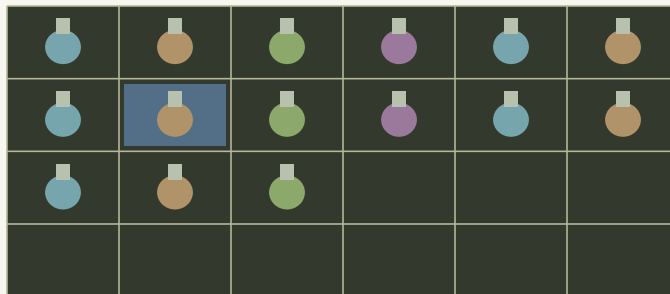

Try the optional helpers

These start off. Enable one at a time so it is easy to see which setting changes the display.

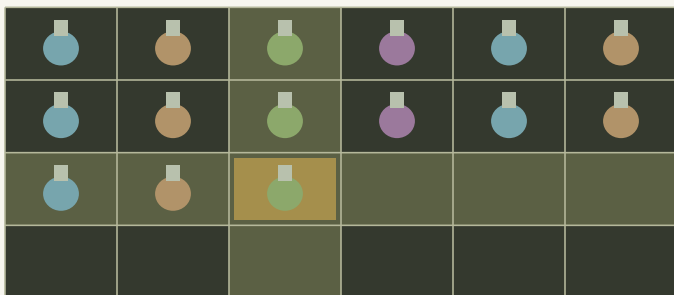

Highlight hovered square

Move the mouse over a cell.

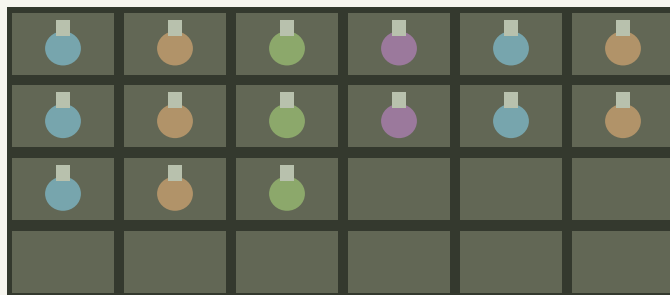

Highlight drag source

Drag an item; its original cell is marked.

Hovered row / column guides

Move the mouse; follow its row or column.

Separate shading appearance

Use a separate color and transparency.

ILLUSTRATIONS - HOVER/SOURCE GUIDES DO NOT PREDICT AN ACTUAL DROP OR SWAP

Presets: try Subtle, High contrast and Drag only. Return to **Custom** to use your saved custom values again. Presets do not overwrite them.

Section gaps: if your bank has tab headings or separators, try **Keep section gaps clear**. Check that the grid stays aligned above and below the gap.

BANK SLOT BORDERS - COMMUNITY TEST BUILD

Finish the test and report issues

A clean startup alone is not a complete test. Use these checks while the bank is open.

- ☐ Scroll up and down; partial rows stay clipped.
- ☐ Switch tabs, search, and clear the search.
- ☐ Check items, placeholders and empty cells.
- ☐ Close/reopen the bank; toggle the plugin.
- ☐ Resize the bank or try stretched mode if used.
- ☐ Try your usual Bank Tags layouts if used.

If something goes wrong

Windows blocks or flags the launcher

Stop and send the exact warning. Do not disable antivirus or system security.

Launcher shows a red error or setup fails

Keep the window open and copy the last error lines. Internet is required on the first start.

RuneLite opens but there is no grid

Use the development client; enable Bank Slot Borders and Show grid. Check transparency is below 10 and Only while dragging is off.

Jagex account cannot sign in

Use the Jagex auth sidebar, not a password typed into the launcher. Follow the official login guide on page 2.

Send a useful report: Windows version, grid style/preset, enabled helpers, what you did, what you expected, and what happened. Include a screenshot of alignment or the exact error text. Hide account names, login codes and tokens.
